

FOUNDATION SUPPORT RODS

What you need for installation:

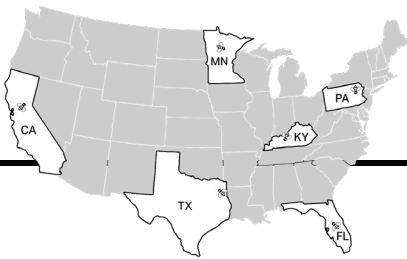

1. Pliers (not included)

Installation Directions:

1. Insert a rod through the hole in one end bar, extending across the foundation, and into the hole on the opposite end bar. Pull the rod tight.
2. Install the locking nut by pushing it onto the pointed end of the rod until it fits snugly against the end bar.
3. Ensure the rod remains tight, then use pliers to snip off approximately 1/4" of the rod.
4. For additional support, rods can be installed on alternating sides of the foundation.

ADDITIONAL NOTES:

The foundation should be positioned close to the rods but does not need to be embedded into the wax.
